

AutoCAD is also licensed by third-party developers, making it available to the public as a cloud service, or on a subscription basis. For a low price, users can pay monthly for access to their own online AutoCAD environments. In addition to the main AutoCAD software package, some cloud-based services offer the AutoCAD LT software for learning and prototyping purposes. CAD Users Around the World AutoCAD has established a strong market share for users in engineering, construction, architecture, and automotive applications. With support from a dedicated user community of more than 75,000 registered developers, AutoCAD is the leading professional software package. The Autodesk estimates that AutoCAD is used by over one million people worldwide each day. AutoCAD users are located in every country in the world, spanning more than 100 countries. History The history of AutoCAD begins in 1975, with the release of AutoCAD Level 1. In 1981, the first version of AutoCAD for desktop microcomputers was released. AutoCAD was first available for IBM-compatible personal computers (PCs) in 1982. Starting in 1990, AutoCAD LT software was developed to provide CAD tools for the non-CAD user, without requiring CAD experience. In 1994, the first version of AutoCAD for Windows was released. In 1997, Autodesk introduced Revit, the first 3D-based software package for commercial buildings. Revit received an architecture and engineering award from the National Building Information Center (NBIC) in 1997. In 2000, Revit was released for the first time on mobile devices, and more recently, has expanded to include the web. In 2011, AutoCAD Civil 3D software was released to provide a complete, integrated product for design and construction of public works, and infrastructure projects. In 2013, Revit was renamed Autodesk AutoCAD, to reflect its broadening market coverage, including architecture, engineering, construction, manufacturing, building information modeling (BIM), and automotive applications. An AutoCAD Beginner's Guide will help you use the software tools effectively.
